

DZone Trend Report

NOVEMBER 2022

Performance and Site Reliability: Observability for Distributed Systems

The concept of observability was introduced a little over 60 years ago as a notion related to control theory, systems theory, and signal processing. Today, modern observability is still very much focused on looking at systems' outputs to determine their internal states. DZone's 2022 Trend Report on **Performance and Site Reliability: Observability for Distributed Systems** takes a developer-focused assessment to see what the current state of observability is and to see how it fits in with modern performance practices.

Expert Insights

The Performance and Site Reliability Trend will cover topics such as:

- A primer on distributed systems observability
- Monitoring-conscious, cloud-based architecture design
- A framework for developing the right Service Level Objectives (SLOs)
- AIOps and observability
- Alerting strategies to avoid driving your on-call team crazy
- Logging Implementation patterns and anti-patterns
- How to enact an SRE program at an organization and how to help it scale (how to develop a Center of Excellence)
- A deep dive into distributed tracing
- A roadmap/reference architecture guide for building a centralized logging service
- Building an open-source observability toolchain (OpenTelemetry, Prometheus, Grafana)
- Prospective performance degradation patterns ...and much more.

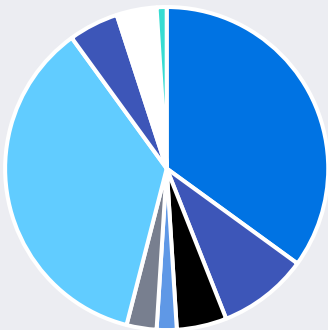

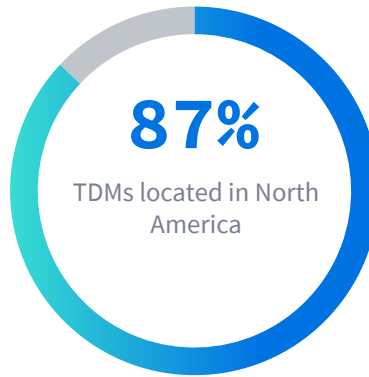

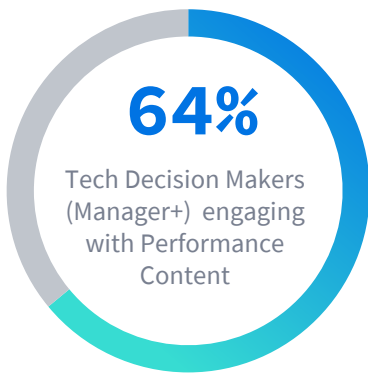

Developer Survey

The research component of this Trend Report will explore topics including, but not limited to:

- General performance accountability and ownership within the organization
- The level of achieved end-to-end observability in at least one critical system
- Most common tools for implementing logging, monitoring, and alerts
- Where observability tools are run (public cloud, private cloud, on prem, etc.)
- Selection criteria for choosing observability tools.
- Perceived biggest wins/benefits of adopting proper observability
- Key performance metrics/analytics
- Cultural/other challenges for adopting observability/best practices
- Measuring respondents' current confidence in their ability to detect and remediate critical issues
- Measuring respondent's guess at what level of visibility they have into their application

Average monthly visitors engaging with Performance-related content on DZone.com

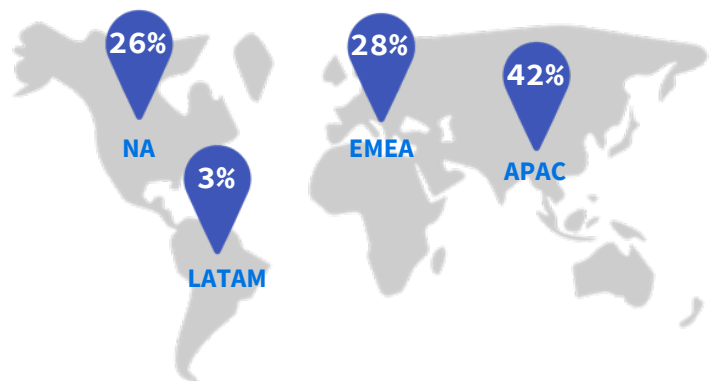

Downloader Job Roles

- **35%** Architect, Software Developer
- **36%** Programmer, Developer
- **9%** Development Manager, Lead Developer
- **5%** QA, Testing, Compliance
- **5%** Executive Manager, VP, CTO, CIO
- **4%** System Admin, DBA
- **2%** Marketing, Sales, Communication
- **1%** Web Designer, Graphic Designer
- **3%** President, CEO, Owner

DZone is **6.6x** more likely to reach Performance and Site Reliability intenders.

112K+ Businesses with intent for Performance and Site Reliability content are visiting DZone.

Recommended packages:

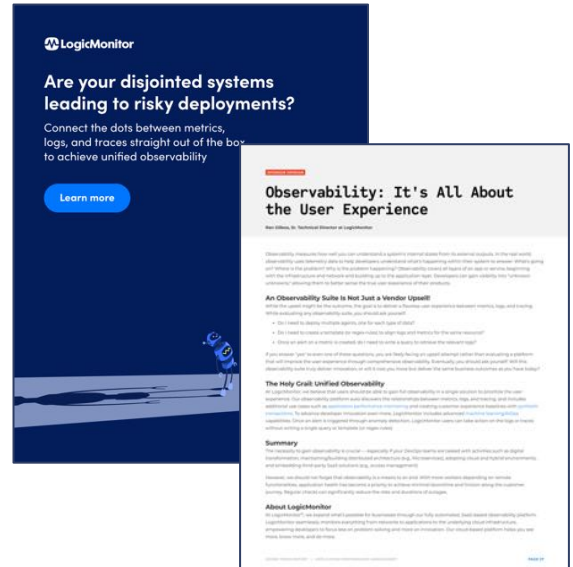

CONTENT SPONSOR

- Front Page Logo Placement
- Two-page spread, including (1) Full-page ad and choice of:
 - One-page Case Study, or
 - Advertorial
- 750 Global Contacts
- Sponsor Spotlight Report: A white labelled report for sponsor marketing usage post-campaign
- Solutions Directory: Sponsor product(s) inclusion with preferential placement.

RESEARCH SPONSOR

- Front Page Logo Placement
- Two-page spread, including (1) Full-page ad and choice of:
 - One-page Case Study, or
 - Advertorial
- 750 Global Contacts
- Sponsor Spotlight Report: A white labelled report for sponsor marketing usage post-campaign
- Solutions Directory: Sponsor product(s) inclusion with preferential placement.
- Research Add-On (Choose 1):
 - Custom Survey Question
 - Survey Raw Data

How Trend Reports Reach DZone Readers

Each Trend Report is promoted to DZone readers across DZone.com, newsletters, and social media:

- Inclusion in 5-7 Daily Digest newsletters
- Inclusion in 1 Weekly newsletter
- 2-4 Dedicated emails
- Prominent and relevant onsite promotional placements and front-page features
- Promotions across DZone social channels
